What is the corona virus?

The corona virus is a family of viruses that can cause a wide range of illnesses, from the common cold to more severe diseases such as SARS and MERS. The most recent strain of the corona virus, SARS-CoV-2, causes the disease COVID-19.

What are the symptoms of COVID-19?

The most common symptoms of COVID-19 are fever, cough, and shortness of breath. Other symptoms can include fatigue, muscle aches, headache,

sore throat, loss of taste or smell, and diarrhea.

How is COVID-19 spread?

COVID-19 is spread through close contact with an infected person. The virus can be transmitted through respiratory droplets that are produced when an infected person coughs, sneezes, or talks. These droplets can land in the mouths or noses of people who are nearby or they can be inhaled into the lungs.

Who is at risk for severe COVID-19?

People who are at higher risk for severe COVID-19 include older adults, people with underlying health conditions such as heart disease, lung disease, or diabetes, and people who are immunocompromised.

What is the treatment for COVID-19?

There is no specific treatment for COVID-19. Treatment is supportive and focuses on relieving symptoms and preventing complications.

What is the race for the vaccine?

The race for the vaccine is a global effort to develop a safe and effective vaccine for COVID-19. There are currently several vaccine candidates in development, and some have already begun clinical trials.

When will a vaccine be available?

It is difficult to say when a vaccine for COVID-19 will be available. However, some experts believe that a vaccine could be available by the end of 2021.

What can I do to protect myself from COVID-19?

There are a number of things you can do to protect yourself from COVID-19, including:

- Washing your hands frequently with soap and water for at least 20 seconds
- Avoiding close contact with people who are sick
- Wearing a mask when you are in public
- Getting vaccinated when a vaccine is available

The corona virus pandemic is a serious threat to global health. However, there is reason to be hopeful. Scientists are working hard to develop a vaccine, and there are a number of things you can do to protect yourself from the virus.
